

list is a linked list which contain all the redirections and args between two pipes.

content is a string which contain the name of the redirection.  
guillemet is a char, his value is '<' or '>' (could be a bool).  
is\_double is to indicate if it's '>>' or '<<'.

Exemple :

echo "coucou" > test.txt | cmd "arg with space"<in'p'""u't >>output
